

Generating RF frequencies to be carried over power lines is something that I cannot understand. As a two way radio repairman and amateur radio operator for 30 years I have a very difficult time stopping harmful interference to licensed users from the normal intermittent arcing of 60 Hz power lines. The FCC already needs a special field task force to aid and assist these licensed users and their hired technicians to resolve the present arcing problems. Now there is going to be RF placed on the power carrier lines on purpose! This is going to be the end of two way radio as we know it! The customer cannot afford to spend countless dollars hiring a technician to follow up on this new interference. I already give away hours of my labor for normal arcing follow ups because I don't want to loose my customers. I say to the power carriers. Clean up your present harmful radiation before generating more!

Thanks,
Steve Horton
